NEED A FIRE ENGINE.

The school board nearly destroyed by spontaneous combustion.

Commissioner Holloway, as he sat in the chair at the school board meeting last night, looked like one of the early martyrs. The council chamber has been smoldering all afternoon away, and when the firemen came up, four thermometers called loudly for someone to fan them, while Janitor Riley came and had to be anchored out in the race to re-ignite.

Only four of the commissioners were present—Commissioners Sutherland, Judd and Stevens being detained by other business. The session lasted nearly two hours, most of the time being taken up by agents for different systems of heating and ventilation. Finally Clerk Metcalf's table was overcome by the heat and began to smoke, so the board got a small boy with half a dozen fans, to cool off the air, and adjourned until to-night.

THE NEW POTATO BUG.

Reappearance of an Ugly Pest after an Absence of Many Years.

Frequently during the long dry spell complaints have reached us from potato-growers in different parts of the county, of the appearance in large numbers of a new potato bug. Growers state that the new pest is more destructive to potato vines than the little Colorado beetle. In many places in this county these little insects have entirely ruined the plant. They come and go in great swarms, and in a day or two will entirely devour the entire "patch." They are partial to the potato, seldom molesting other vegetation. Many of the older farmers claim this pest is identical with the same insect that troubled growers in all the western and middle states previous to the appearance of the Colorado beetle, and which seemed to have disappeared entirely with the appearance of the western pest. Recently Prof. Henry of the Wisconsin Experimental Farm, has given the new comer the name of "Colorado beetle." The much attention and study, and reports it to be a species of the "Colorado beetle" (Colorado beetle). The professor says the only remedy known to him is to scatter straw between the rows of potatoes, whip the beetles into it, and set the straw on fire. The pest was first reported as troubling the potato crop by superintendents of the poor, William B. West, of Dane county, who described it as having a body about three-quarters of an inch long, tapering from back part—which is quite broad—down to a point at the head. It is striped like the Colorado beetle, and has six legs, with which it gets over the ground with great speed. The head is clearly separated from the body by a neck, and is round in shape. It is very lively in its movements and exceedingly difficult to capture. The new pest began to appear in the latter part of the season, and has now become a pest to the potato crop.

The school board nearly destroyed by spontaneous combustion.

Commissioner Holloway, as he sat in the chair at the school board meeting last night, looked like one of the early martyrs. The council chamber has been smoldering all afternoon away, and when the firemen came up, four thermometers called loudly for someone to fan them, while Janitor Riley came and had to be anchored out in the race to re-ignite.

Only four of the commissioners were present—Commissioners Sutherland, Judd and Stevens being detained by other business. The session lasted nearly two hours, most of the time being taken up by agents for different systems of heating and ventilation. Finally Clerk Metcalf's table was overcome by the heat and began to smoke, so the board got a small boy with half a dozen fans, to cool off the air, and adjourned until to-night.
